Skills

Languages: Java, SQL, Python, JavaScript, TypeScript

Backend: Spring Boot, Spring, Hibernate/JPA, REST APIs, Microservices, Spring Security

Database & Messaging: MySQL, PostgreSQL, Redis, Kafka, SQL Query Optimization, Database Indexing

Cloud & DevOps: AWS (EC2, S3), Docker, Kubernetes, Shell Scripting

Engineering: Git, OOP, Design Patterns, System Design, Distributed Systems, Multithreading, Debugging, Performance Optimization, Agile/Scrum

Work Experience

Xopuntech India Pvt. Ltd., Guwahati

Software Engineer

Jun 2024 - Present

Client: Nextiva & TataPlay

- Developed and maintained backend application features using Java, Spring Boot, REST APIs, and SQL, following established development and project standards.
- Led remediation of security vulnerabilities across multiple application modules, improving application security, reliability, and overall code quality.
- Designed and developed multiple dashboards end-to-end, implementing backend APIs, business logic, database interactions, and React-based user interfaces.
- Improved application performance by identifying slow database operations, optimizing SQL queries, introducing appropriate indexes, and eliminating unnecessary joins.
- Reduced API latency through backend optimization, efficient database access, query tuning, and pagination mechanisms.
- Investigated and resolved application issues through debugging, root-cause analysis, and collaboration with QA and DevOps teams.
- Participated in code reviews and collaborated with cross-functional teams to deliver reliable application features and resolve development and production issues.
- Supported application deployments and production releases, working with DevOps and QA teams to ensure smooth release cycles.
- Worked with AWS services including EC2 and S3, along with Docker and Shell scripting, as part of application development and deployment workflows.

Education

Cotton University

MCA – Master's in Computer Application

Aug 2022 – Jun 2024

CGPA: 7.20/10

Relevant Coursework: Object Oriented Programming, Databases, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning

Project Work

- **Scalable Real-Time Ticketing Platform (BookMyShow Clone):** Designed and developed a distributed ticket booking platform using Java, Spring Boot, Kafka, Docker, Kubernetes, PostgreSQL, and Redis. Implemented microservices, REST APIs, distributed seat locking, asynchronous messaging, caching, idempotent workflows, and retry mechanisms to handle high-concurrency booking requests reliably.
- **StrideCal:** Developed features for a microservices-based EdTech platform using Java, Spring Boot, React, and SQL. Built secure REST APIs for course subscriptions, enrollment, and user management, implementing Spring Security, OAuth2, request validation, exception handling, and database integration for reliable application workflows.

Awards and Certificates

- **Mentor at XT Academy:** Mentoring students and working professionals in problem solving, coding, and system design.
- **GeeksForGeeks:** Made it to the final round of Geek-O-Lympics 2.0 by GeeksforGeeks.
- **Scaler:** System Design of Notification Services
- **IBM:** Python for Data Science and AI
